2.3.1 - Student centric methods, such as experiential learning, participative learning and problem solving methodologies are used for enhancing learning experiences.

Faculty members use a variety of methods to improve learning experiences, such as the lecture technique, interactive method, project and field work method, computer-assisted method, experiment method, and so on. These practices improve the effectiveness of teaching and learning activities. Many professors employ traditional black-board presenting methods, particularly in mathematics, trade, Commerce statistics, and economics, where mathematics and statistics are taught as numerical problems. Some teachers also make use of power point presentations and computer-based tools. For example, in addition to the traditional oral presentation techniques, they employ YouTube lectures to make studying more exciting.

Some Student centric methods are given below:

Project methods:

The project work piques students' interest in the subject and allows them to think freely and freely share diverse points of view. The project work has been completed in accordance with the syllabus requirements. Projects, for example, are completed in PG classes such as MSc Botany and M.A.-Marathi.

Interactive methods:

Faculty members encourage student engagement in group discussions, role-playing, topic quizzes, news analysis, educational games, debate and questions and answers on current events, and so on. Under features, class discussions on various themes are held. NSS, the Political Science Department, and the English Department, in particular, organise interactive techniques many times a year.

ICT Enabled Teaching:

Wi-Fi enabled class rooms with LCD, Language Labs, Smart Class rooms, and other ICT-enabled teaching methods are examples of ICT-enabled teaching. To improve the

teaching-learning process, the school employs contemporary pedagogy. The institution has the necessary equipment to assist professors and students. These services are used mostly by the UG/PG class and the Botany, History, English, Political Science, Computer science departments.

Experiential learning:

In science classes, the experimental/laboratory technique is utilized to familiarize pupils with facts through direct experience. Experiments assist students validate the subject's facts and laws. This approach is particularly popular in the departments of Chemistry, Physics, Botany, and Zoology. Students become interested and learn via experience learning.

Student Seminars:

The Student seminars are organized where in the papers are presented by students on contemporary topics to enrich their learning experience.

Summer Internship Program:

For NSS& NCC students, the NSS & NCC Swachh Bharat Internship is organised. Students can take part in this programme, where they will learn the value of cleanliness. They complete their 100-hour mission in the designated communities via the NSS camp. Except for NSS, the college does not organise any other academic Summer Internship Programme.

Group Learning Method:

The Whatsapp group is currently being used for group learning. This strategy is used by students to exchange their notes and study materials. A pupil or a contract instructor creates a Whatsapp group. They pass on the knowledge to one another.

Black-board presentation:

Each student is given a different question in this technique. And the pupil must solve the issue on the blackboard. This approach was developed by the mathematics department.

As per the guidelines of Sant Gadge Baba Amravati University, Amravati our college hosted and organized One Day Program on CBCS-NEP Executors Training Program on 17/09/2022. For this Program Dr.D.W.Nichit (Principal, Sant Gadge Maharaj Arts, Commerce & Science College, Walgaon) was deputed as Master Trainer. Principals and Faculties from Smt. Savitabai Uttamrao Deshmukh College, Digras; Arts & Commerce College, Bori Arab; Late R.B. Arts, Commerce & Smt. S.R. Bharati Science College, Arni; Ishwar Deshmukh Institute of Pharmacy, Digras aligned with SGBAU, Amravati participated in this program. The activity was a great success. It successfully achieved its objective of understanding the concept, policy, practice and procedure of Choice Based Credit System and National Education Policy. The event was guided by our Principal Prof. V.L. Khalatkar.

Name of Activity/Programme	National Voters Day
Date of Activity	25 January 2023
Number of Students Participated	150
Number of Teachers Participated	07
Organized by	Department of Political Science

Department of Political Science and NCC organized National Voter's Day Programme for creating awareness in the college students and all the staff in the session 2022-23. The programme was presided by Captain V. L. Khalatkar (Principal). The chief guest of this programme was Mr. Sudhakar Rathod (Tahasildar, Digra), Mr. Vasant Rathod (Nayab Tahsildar, Digra). The keynote speaker was Lieutenant Dr. A. D. Jadhao (Head, Department of Political Science & ANO). He expressed the importance of elections and voting in democracy and also appealed to the students for voter registration. In this programme Tahasildar felicitated the new voters by giving voting cards.

State level online Quiz Competition, Essay writing competition was organized by the department of Political science on this occasion.

Survey of migratory birds

What is Bird Migration ?

Bird Migration is the regular seasonal movement, often north and south, along a flyway, between breeding and wintering ground. Many species of bird migrate.

Migratory birds :-

Lesser whistling duck

Cotton teal

Comb duck

Red crested Pochard

Yellow-wattled Lapwing

Black-winged Stilt

Wood Sandpiper

Eurasian curlew

ayna

History behind bird Migration.

In the Pacific, traditional land finding techniques used by Micronesians and Polynesians suggest that bird migration was first observed and interpreted for more than 3,000 years. In Samcan tradition, for example, Tagaloca sent his only at the end of the 18th century was migration accepted as an explanation for the winter disappearance of birds from northern climes.

aynes

* General patterns

Migration is the regular seasonal movement often north and south, undertaken by many species of birds. Bird movements include those made in response to change in food availability, habitat, or weather. Sometimes, journeys are not termed "true migration" because they are irregular (nomadism, invasions, irruptions) or in only one direction (dispersal, movement of young away from natal area).

Migration is marked by its annual seasonality. Non migratory birds are said to be resident or sedentary. Approximately 1,800 of the world's 10,000 bird species are long distance migrants.

Many birds populations long distances along a flyway. The most common pattern involves flying north in the spring to breed in the temperate or Arctic summer and returning in the autumn to wintering grounds in warmer regions or to the south. Of course, in the southern hemisphere, the direction are reversed, but there is less land area in the far south to support long-distance migration.

Amu

★ Why do birds migrate?

Birds migrate to move from areas of low or decreasing resources of areas of high or increasing resources. The two primary resources being sought are food and nesting locations.

Birds that nest in the Northern Hemisphere tend to migrate northward in the Spring to take advantage of northward of burgeoning insect population, budding plants and an abundance of nesting of nesting. As winter approaches and the availability of insects and other food drops, the birds move south again.

Introduction

History of Botany:-

Botany as a subject developed out of the study of agriculture and medicine. It was from the 16th century that several attempts were made to systematize the knowledge of the plant kingdom by classifying plants on scientific lines. From the 18th century, classification began to take a definite shape. The 19th century was specially remarkable for the development of the science of botany.

Ancient History :-

In Greece, about 340 B.C., a considerable advance was made in the study of plants, particularly by Theophrastus (372 to 287 B.C.) a disciple of Aristotle (384 to 322 B.C.). In his book, History of Plants, Theophrastus described about 500 plants of food and medicinal value and other economic uses, with their morphological characteristics, particularly the habit of - herbs, shrubs, and trees, and annuals, biennials and perennials.

16th century -

Medical botany dominated the study of plants during the Renaissance period. Brunfels (1464-1534), a German botanist wrote his book on medicinal plants in three volumes in 1530.

17th century -

In 1620 and 1623, Bauhin published his life-long work in the form of two books, containing 6,000 species.

18th century -

A very prominent figure of this century was the Swedish botanist Carolus Linnaeus (1707-78), professor of botany at Uppsala. His monumental work on taxonomy and binomial nomenclature proved to be invaluable to future generations.

19th century -

Two great English botanists, Bentham (1800-84) and Hooker (1817-1911), came together and laid the foundation of a natural system of classification known as the Bentham and Hooker's system (1862-83) which is still widely followed.

To Study Climbers In And Around Digrahs Tahsil

Review of literature

- Climber show great variety in their mechanism of climbing (Bongers et al. 2005; Jongkind & Howthorne 2005). These include root climber, branch twiner, stem twiner, scramblers, tendrill climber and hook/thorn climbers. The most common in the forest edges are the tendrill climbers where the common support is through smaller thread like structures called tendrils, than in forest insides (Putz & Holbrook, 1991). on the other hand stem and branch twiners are more consistently spread in later staged successional forests (Dewalt et. al. 2000).
- Climbers and creepers are important components of plant diversity and are also valuable for their medicinal uses, nutrient recycling, etc. (Schnitzer and Bongers, 2002). The climber are rooted in soil but need for a support to their, weak stem (Richards 1952). Ex-situ conservation of climbing plants are very much needed with reference to their roles that they play.
- Climbers are weak stemmed plants (Dutta, 1689) showing variations from trees and shrubs which are self-supported plants. These are different in their mechanical characters (Isnard et al. 2009). well adopted to climb on any support like large trees, suitable, modifications for mechanical support viz, hooks, tendrils and hooks in modified form are found in these kind of plants.
- Climbers form an essential part of the diet of many animals in times of scarcity of flowers and fruits (Putz and Windsor, 1987).
- Climbers occur in all woody ecosystems of the world althrough a high abundance is considered to be characteristic of tropical and subtropical forests (Bongers et al. 2005). specially, in tropical forest, they comprise about 25-30% of species diversity (schnitzer and Bongers, 2002).
- Climbers play important ecological roles in the forest ecosystem dynamics and functioning (Nabe - Nielsen, 2001; Bongers et al. 2002).

Materials and Methods

The mention investigation was carried out in the year 2022-2023. This worked are based on collection 2022 to 2023 through planned exploration were well organized during the six to seven month. Regular field trips carried out during this work, during frequently visited different area of Digras Tahsil. During collection trips plants were collected in different stages and photographs were taken with the help of Digital camera. The collection of photograph of climbing plant is taken in some place of Digras Tahsil. Wild varieties are collected at Singad forest and some farm also. During field visit we visited Bhawani Tekdi which have variety of flora. Different characters such as habit, habitat, life form, growth form etc. were noted in the field dairy. Identification of plants was carried out with the help of plant taxonomists and with reference to relevant local Manuals and floras. The identified record plants were further verified with flora of Presidency of Bombay by T. Cooke Vol 1 and 2, flora of Maharashtra stat (BSI) Vol 1 and 2 by N.P Singh and S. Karthikeyan, flora of Yavatmal district (BSI) by S. Karthikeyan and Anand Kumar.

For convenience, according to Bentham & Hooker all the selected plants species are arranged and presented with colour photographs, scientific names, local names, families and morphology is given in the present work.

***Basella rubra* L.**

Family : Basellaceae

Common name : Indian Spinach, Poi, Velbendi

Introduction :

Basella rubra is an edible perennial vine in the family Basellaceae. It is found in tropical Asia and Africa where it is widely used as a leaf vegetable. It is native to the Indian subcontinent, Southeast Asia and New Guinea. It is naturalized in China, tropical Africa, Brazil, Belize, Colombia, Philippines, the West Indies, Fiji and French Polynesia.

Habit of *Basella rubra*

Discription :-

Epipremnum aureum is an evergreen vine growing to 20m (66ft) tall, with stems up to 4cm (2in) in diameter, climbing using using aerial roots which adhere to surfaces. The leaves are alternate, heart-shaped entire on juvenile plants, but irregularly pinnatifid on mature plants up to 100 cm (39 in) long and 45 cm (18 in) broad; Juvenile leaves are much smaller, typically under 20cm (8 in) long. Flowers are in the form of spathe and spadix, with cream, boat-shaped spathe (large leaf-like bract) that surrounds the spadix (Flowering spike), carrying small flowers and fruits. Berries are formed in the spadix that turn orange to red when ripen.

Adesive root of *Epipremnum aureum*

Uses :

1. In temperate regions, it is a popular houseplant with numerous cultivars selected for leaves with white, yellow or light green variegation.
2. It is often used in decorative displays in shopping centers, offices and other public locations largely because it requires little care and is also attractively leafy.
3. In tropical countries, it is found in many paths and gardens and tends to grow naturally.

Conclusion

There are dense forest i.e. Singad forest found in Digras Tahsil. The list of species studied with systematic description of wild, cultivated and ornamental climber species of Digras Tahsil. All climber species differs from one another. They all have unique characteristics from the prehistoric time the species have been utilized, praised and worshiped by human beings.

This research work includes the description of near about 25 climber species, out of which some are wild and some cultivated but most of are ornamental.

Digras Tahsil contain a diversity of tree species with a great potential for people and environmental large for curing diseases. Many types of climbers present in Singad forest of Digras Tahsil are use by the human beings. While studying on my topic I found a conclusion that climber species plays important role in various fields such as in food, in medicine, and in decoration also.

My conclusion during the study time of climber species found in Digras Tahsil is that there are various important climbers are present, but some of them are on the way to become rare and endangered species, so we must need to conserve and save the trees for which plantation is necessary. Because of deforestation the problem of global warming arises. To stop the adverse effect of global warming the plantation of tree and save tree is very much important.

Activity Report 2022-2023

Name of the Activity Program	One Day Work Shop on Self Defense for Women
Date	11.04.2023
Place	Old Hostel Terrace College Campus Digra
Organized by	IQAC
Collaboration with (if any)	Department of Sports and Physical Education
No. of student participants	30 plus
No. of teacher participants	2 plus

The IQAC and the Department of Sports and Physical Education sponsored a one-day workshop on self-defense for women on April 11, 2023. Dr. R. M. Kadam and Dr. R.N. Karhade were present. Dr. R.M.Kadam concentrated on practical martial arts skills for college women on how to protect those using martial arts.

Dr. Kadam advocates striking martial arts over close-combat techniques for female self-defense since distance is critical when fending off a larger and stronger adversary. The use of foot strikes in Judo and other martial arts allows you to protect yourself with your longest and strongest weapons, your legs.

Name of Activity/Programme	New Year Awareness Rally
Date of Activity	30 December 2022
Number of Students Participated	364
Number of Teachers Participated	08
Organized by	Department of English & IQAC

On the occasion of New Year 2023 a rally was arranged to celebrate the New Year with discipline and without using any drugs can be a beneficial approach for many reasons. While it is often associated with parties, social gatherings and indulgences, celebrating a New Year with a discipline can help students maintain focus on their goals and priorities while avoiding excesses that can lead to negative consequences. The students also appeal the society to avoid the drugs for celebrating the New Year. Celebrating the New Year with discipline can help individual stay focused on their goals and maintain a healthy and balance lifestyle.

Prof. V. L. Khalatkar, Dr. M. N. Dhore, Prof. Gadkar, Prof. Dr. M. N. Bhagat, Prof. Aruna Chavhan, Prof. Badhe, Prof. Deshpande took sincere efforts to make the rally successful.
